What makes Alginate unique?

Alginate is derived from natural seaweed and is known for its moisture absorbant and soothing properties.

The Oakmed Alginate baseplate is infused with 15% Alginate & may help to promote skin health around the stoma.

Get the most out of your Alginate bag by following these handy tips!

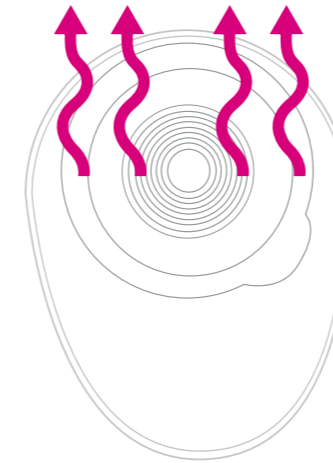

USE A HAIR DRYER

PLACE UNDER THE ARM

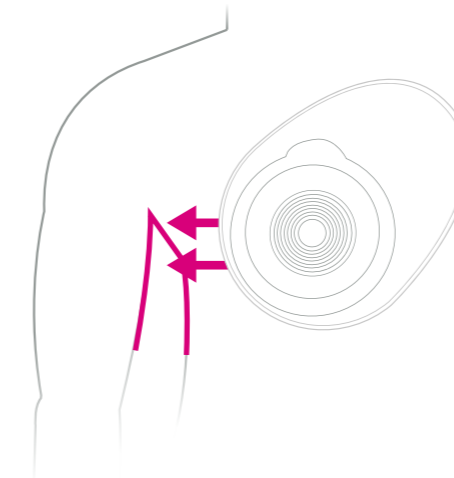

PLACE ON A RADIATOR

TUCK INTO YOUR WAISTBAND

STEP 1

Before applying the new pouch, **warm up to wake up** the healing properties within the wafer.

STEP 2

This can be done in many ways, place under the arm, sit on it, put on a radiator, use a hairdryer or tuck into your waistband.

STEP 3

Do not apply any powder, barrier film etc around the stoma (even if it is moist or bleeding) if you do, this will put a barrier between the skin and the healing properties in the wafer/flange (unless directed by a medical professional to do so).

STEP 4

When on, keep your hand over the new bag for a little longer.
